## AuraCam 6000-“Coggins Camera”

The AuraCam 6000-Coggins Camera gathers data from you, using the biofeedback hand sensors that take electro-dermal and temperature readings. Using proprietary algorithm, a representation of aura colors are then projected onto your instant photo. The AuraCam 6000 is unique in the world of aura imaging devices because it can determine environmental deviations and correct for them-so the data collected is more accurate.

## Aura Cloud 3D Pro

The Aura Cloud 3D Pro System is the latest development in aura reading technology. The enhanced camera and optimized aura imaging software again use a biofeedback hand sensor to collect your aura and chakra readings. The proprietary software then generates a personalized multi-page report detailing your aura, chakras, and a personal profile based on your moment in time readings. We print and bind these reports as well as leave you with a glossy aura photo.
